

CNC Machining

Providing exceptional high-quality machined components, delivered on time, every time....

- **ISO 9001:2015 Approved**
- **Fast quotes**
- **Competitive prices**
- **Flexible lead times**
- **Extensive experience in plastic machining**
- **Machining design advice**

Panel Graphic are dedicated to providing an unrivalled precision machining service in a variety of different materials and grades, specialising in plastic machining.

The close attention to detail we pay from initial order right through to dispatch is due to our highly skilled and focused team. Our extensive production machining skills means we are competent at delivering unrivalled quality components at competitive prices for prototype through to production quantities.

All Panel Graphic machined components are subject to our rigorous inspection regime with designated inspectors, in-line process inspection and a full final inspection completed on each and every part. This ensures any components delivered under our brand meet our high-quality standards.

Panel Graphic has extensive knowledge of producing a wide variety of components in engineering plastics such as; **ABS, Acetal, Acrylic, Delrin, Nylon, Polycarbonate, Polyethylene, Polyimide, Polypropylene, PPSU, PTFE, PVC** and many other variants. With the vast majority of components being machined in plastic, we have become experts in delivering exceptionally high-quality components in some of the most difficult grades of materials to machine.

Panel Graphic has invested in the very best **CAD/CAM** software and machining equipment to complement our highly skilled engineers to ensure your product is manufactured in the most efficient and cost-effective way.
